

Dear stakeholder,

The Danish based company GrowGrounds ApS is developing a carbon Programme of Activities (PoA) called “Global Syntropic Agroforestry Program” which will be certified under the Gold Standard for the Global Goals (GS4GG). The PoA will cover several countries (for the list of countries, please see attached Key Programme Information) for which a PoA Design Consultation has already taken place. The PoA will now be extended to The Republic of Kenya and therefore an additional PoA Design Consultation will be conducted for Kenya.

The objective of the PoA – being the framework - is to accommodate agroforestry projects on farmers’ lands following syntropic principles with the aim to restore soils, enhance food security of farmers, increase resilience of supply chains and remove the greenhouse gas carbon dioxide (CO₂) from the atmosphere through carbon sequestration.

We are interested in receiving your comments on the programme design at this early stage of PoA implementation so that we can further improve the programme design. Please find attached to this invitation the Key Programme Information of the PoA.

You are invited to fill and send back the attached Feedback Form by **19th of April 2025** latest to allow us to take into account your suggestions.

Please don’t hesitate to contact us in case you have any questions or requests for clarifications.

Please feel free to forward this invitation to other organizations or individuals who you consider as relevant stakeholder for this PoA and who might be interested in providing their feedback.

In case of any questions or requests for clarifications, please contact:

Christina Singh (GrowGrounds)
